自然言語処理 parser 試作に関する報告書

島田歩†

†ayumu.shimada@gmail.com

1 始めに

本実験報告書は以下の章立てで構成されている:

第1章 始めに

第2章 実験の目的

第3章 自然言語処理の概要

第4章 実験の結果

第5章 考察

第6章 まとめ

また,巻末には,参考文献リストと付録および手書きの 図がある

特に,第5章の考察では,文の解釈を一意に特定できない問題と非文が生成される問題について述べている.

2 実験の目的

自然言語処理において、基本技術の一つになっている 構文解析技法について、その原理を学ぶ¹⁾. また、自然 言語処理における構文解析の困難さについても実際に体 験する.

3 自然言語処理の概要

自然言語処理 (natural language processing: NLP) とは、人間が書いたり話したりしたりする文章をコンピュータに処理させることである $^{1)}$. これは、文章の中の単語の品詞を決定するための形態素解析、単語間のつながりを調べる構文解析、単語や文の意味を解析する意味解析および必要な応答文を生成する等の処理を含む $^{1)}$.

また、Chomsky によれば、言語は、形式言語を用いて階層化できる(図 $\mathbf{1}$)。なお、正規文法は有限オートマトンで、文脈自由文法 (context-free grammar: CFG) はプッシュダウンオートマトンで、それぞれ認識できる。

3.1 有限オートマトン

有限オートマトンは入力記号列と現在の状態に応じて 次の状態へ遷移する.入力記号列を入力し終えたときに

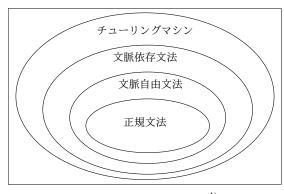

図1 Chomsky の言語階層 1)

受理状態にあれば,その入力記号列は受理可能である.

3.2 プッシュダウンオートマトン

有限オートマトンに補助記憶装置としてプッシュダウンスタックを取り付けたものがプッシュダウンオートマトンである.入力記号列を入力し終えたときに受理状態にあり、かつ、スタックが空であれば、その入力記号列は受理可能である.

3.3 あいまい性

文脈自由文法では、構文木が複数得られることがある. この場合、その文法はあいまいであると言う.

4 実験の結果

4.1 ネットワーク文法の実験

4.1.1 手による解析

表 1 の文法規則と表 2 の単語辞書を用いて "I saw a girl with a telescope." を形態素解析した結果を図 2 に示す.

4.1.2 プログラムによる解析

文法規則と単語辞書に表 1, 表 2 および表 3 を用い, 作成したプログラムで "I saw a girl with a telescope." と "the child runs quickly to the large house." の 2 文を形態素解析した結果を示す.

4.2 文脈自由文法の実験

4.2.1 手による解析

表 4 の文法規則と表 2 の単語辞書を用いて top-down 法および CYK 法により構文解析した結果を、それぞ

large	\rightarrow	ADJ (形容詞)
house	\rightarrow	NOUN (名詞)
	\rightarrow	end

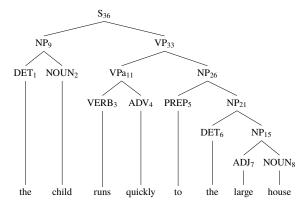

図 6 "the child runs quickly to the large house" の構文木

さらに,表 4 の文法規則と表 2 の単語辞書を用い,"I saw a girl with a telescope"を構文解析した結果得られた構文木と S 式をそれぞれ図 8a と図 7 に示す.

5 考察

5.1 "I saw a girl with a telescope." の 2 つの解釈

"I saw a girl with a telescope." には大きくわけて,以下の2つの意味(解釈)がある:

- 私は望遠鏡を持った少女に会った. (図 8a)
- 私は望遠鏡で少女を見た. (図 8b)

今回の実験の結果得られた解釈は前者だが,表 4 の文法 規則に $VP \rightarrow VP + PP$ を追加することにより,後者の解 釈となる構文木(図 8b)と S 式(図 9)が得られる. 島田:自然言語処理 parser 試作に関する報告書

VPa (動詞句)	\rightarrow	VERB (動詞)	+	NP (名詞句)

```
(S36(NP9(DET1 "the")(NOUN2 "child"))(VP33(VPa11(VERB3 "runs")(ADV4 "quickly"))
(NP26(PREP5 "to")(NP21(DET6 "the")(NP15(ADJ7 "large")(NOUN8 "house"))))))
```

```
(S28(NP1(NOUN1 "I"))(VP27(VERB2 "saw")(SS25(NP10(DET3 "a")(NOUN4 "girl"))
(PP18(PREP5 "with")(NP13(DET6 "a")(NOUN7 "telescope"))))))
```

図7 プログラムによる構文解析結果(印刷の関係上,出力は改行している.)

なお、複数のS式を得るためには、合致する文法規則を見つけるとそこで中止して次のセルに移動するような実装では不可能で、必ず全ての文法規則についてチェックを行い、合致する文法規則を全て記憶しておく必要がある。本プログラムはそれを考慮した実装になっているため、複数のS式が出力可能である。

しかしながら、複数の S 式が出力されるということは 文の解釈を一意に特定できないということであり、この 問題の解決は困難であると考えられる.

5.2 "Time flies like an arrow." の解釈

表 6 の文法規則と表 7 の単語辞書を用い "Time flies like an arrow"を構文解析した結果、4 つの構文木(図 10)と S 式(図 11)が得られた。これらの解釈はそれぞれ以下である:

- 時は矢のように過ぎる. ⇒ 光陰矢のごとし.(図 10a)
- time fly (トキバエ?) たちは矢を好む. (図 10b)
- "矢のようなハエ" たちの速度を測定せよ. (図 10c)
- 矢(の速度を測定するとき)のように、ハエたちの 速度を測定せよ.(図 10d)

さらに, "Time" が雑誌の名前である可能性も考慮すると, さらに別の解釈も可能である.

実際には、「光陰矢のごとし」以外の候補はいわゆる非 文とみなせるが、候補の絞り込みには別の方法を用いる 必要性が示唆される.

5.3 ネットワーク文法と文脈自由文法の能力の比較

第3章で触れたように、形式文法は階層構造をなして おり、文脈自由文法はネットワーク文法を含む、今回作

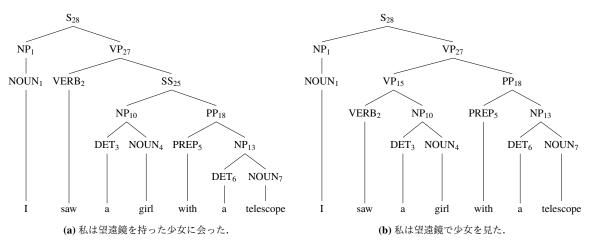

図8 "I saw a girl with a telescope"の構文木

```
(S28(NP1(NOUN1 "I"))(VP27(VP15(VERB2 "saw")(NP10(DET3 "a")(NOUN4 "girl")))
(PP18(PREP5 "with")(NP13(DET6 "a")(NOUN7 "telescope"))))
```

図9 私は望遠鏡で少女を見た(図8b)という解釈になるS式(印刷の関係上,出力は改行している.)

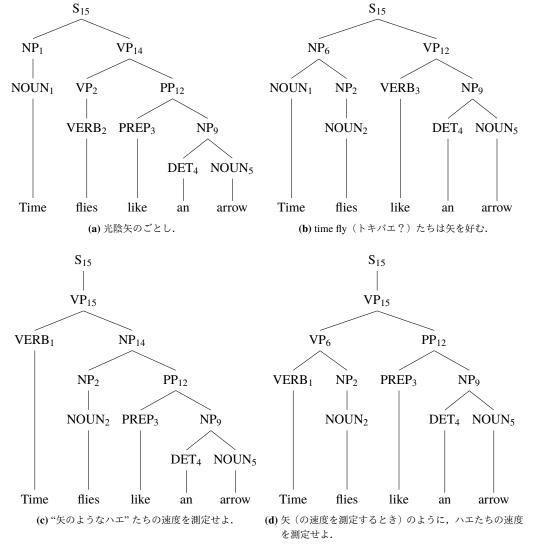

図 10 "Time flies like an arrow" の構文木

島田:自然言語処理 parser 試作に関する報告書

図 11 "Time flies like an arrow"の S 式 (印刷の関係上, 出力は改行している.)

表 6 "Time flies like an arrow"の文法規則

S	\rightarrow	NP	+	VP
S	\rightarrow	VP		
NP	\rightarrow	NOUN		
NP	\rightarrow	DET	+	NOUN
NP	\rightarrow	NOUN	+	NP
NP	\rightarrow	NP	+	PP
VP	\rightarrow	VERB		
VP	\rightarrow	VERB	+	NP
VP	\rightarrow	VP	+	PP
PP	\rightarrow	PREP	+	NP

表 7 "Time flies like an arrow"の単語辞書

Time	\rightarrow	NOUN
Time	\rightarrow	VERB
flies	\rightarrow	NOUN
flies	\rightarrow	VERB
like	\rightarrow	PREP
like	\rightarrow	VERB
an	\rightarrow	DET
arrow	\rightarrow	NOUN

成する際も,形態素解析の部分にはネットワーク文法の プログラムを流用したことから,これが確認できる.

ネットワーク文法においても、遷移規則(文法規則)によって簡易的に構文解析ができたが、構文木(S式)まで得るためには文脈自由文法を用いる必要がある.

しかしながら、文脈自由文法も、今回の考察でも分かったように、文法規則を作成することそのものも困難であるし、複数の構文木が得られてあいまいさが残る問題もある.

5.4 実験の感想

C 言語での実装は比較的大変であったが、オートマトンと構文解析について理解が深まり、本実験の目的は達せられたのではないかと思う.

6 まとめ

構文解析そのものはプログラムにより実現できたが、 構文木が複数得られることから、文の解釈を一意に特 定することや非文の生成を防ぐことの困難さが示唆さ れた.

図13 文脈自由文法のプログラムの動作風景

B.1 インデント機能の使用

S式出力用の関数 print_sexps はインデント機能を有している. main 関数内で

print_sexps(&(cells[CELL_LENGTH - 1].type[i]), type_num, 0);

と呼び出している部分の最後の引数を例えば

print_sexps(&(cells[CELL_LENGTH - 1].type[i]), type_num, 4);

とすれば4文字でのインデントが有効になり、簡易的に木構造を確認できる(図14).

```
(S36

(NP9

(DET1 "the")

(NOUN2 "child"))

(VP33

(VPa11

(VERB3 "runs")

(ADV4 "quickly"))

(NP26

(PREP5 "to")

(NP21

(DET6 "the")

(NP15

(ADJ7 "large")

(NOUN8 "house"))))))
```
